

CONTENTS

1. INTRODUCTION.....	7
2. MATERIALS AND METHODS	23
2.1. Plant material and site	23
2.2. Weather conditions.....	24
2.3. Flowering phenology and abundance	27
2.4. The reproductive system	29
2.5. Observations of insect visits.....	32
2.6. Effectiveness of various insect groups as pollinators	32
2.7. Assessment of the value of cultivars as nectar and pollen sources for insects.....	34
2.8. Data analysis	34
3. RESULTS	36
3.1. Flowering pattern and length of blooming	36
3.2. Structure of synflorescence	43
3.3. Flowering abundance	46
3.4. Stigma receptivity	49
3.5. Pollen and ovule production.....	53
3.6. Pollination experiments.....	53
3.7. Fruit and seed set in the florescences and synflorescence axes	62
3.8. Insect abundance and patterns of visits	67
3.9. Pollen transfer efficiency.....	71
3.9.1. Pollen deposition on stigma	71
3.9.2. Insect pollen loads.....	74
3.10. Nectar composition and pollen flow from mustards flowers	79
4. DISCUSSION	83
5. CONCLUSIONS.....	100
