Foreword	7
Preface	9
Designations	13
1. Introduction	23
2. Thermosets and UFRT composites for identification and validation tests	33
3. Elastic and rheological modelling of thermosets	35
3.1. Assumptions.....	35
3.2. Elastic modelling	35
3.3. Rheological modelling.....	37
4. Homogenization of UFRT composites	45
4.1. Assumptions, representative volume cell and compliances.....	45
4.2. General solutions of selected boundary problems of theory of linear elasticity.....	49
4.2.1. Basic equations in cylindrical coordinates	49
4.2.2. Standard constitutive equations of monotropic material in cylindrical coordinate system	50
4.2.3. Axisymmetric boundary problem.....	51
4.2.4. Boundary problem for disc in in-plane shear	56
4.2.5. Longitudinal shear of monotropic solid	61
4.3. Analytic solutions of selected boundary problems (Lamé-type tasks).....	64
4.3.1. Longitudinal uniform tension in x_1 direction.....	64
4.3.2. Axisymmetric transverse tension in x_2x_3 plane.....	67
4.3.3. Transverse shear in x_2x_3 plane	70
4.3.4. Longitudinal shear in x_1r planes	75
4.4. Experimental validation.....	77
5. Inverse problem in homogenization theory of UFRP composites	81
5.1. General description of improved inverse problem in homogenization theory	81
5.2. Analytic solutions in inverse problem	82
5.2.1. First Lamé-type task.....	82
5.2.2. Second Lamé-type task.....	85
5.2.3. Third Lamé-type task	88

5.2.4. Fourth Lamé-type task.....	91
5.3. Numerical validation.....	92
6. Elastic and rheological modelling of homogenized UFRT composites	95
6.1. Assumptions.....	95
6.2. Elastic modelling	96
6.3. Rheological modelling.....	100
7. Complementary problems.....	105
7.1. Numerical integration of selected improper integrals.....	105
7.2. Experimental unidirectional tension creep test	106
7.3. Identification of viscoelastic constants of thermoset	107
7.4. Determination of effective viscoelastic constants of UFRT composite	109
8. Software and preliminary numerical analyses.....	111
8.1. Software	111
8.2. Gauss-Legendre quadrature testing	111
8.3. Creep function analysis.....	112
8.4. Thermoset complex shear compliance analysis.....	113
9. Experimental and numerical studies	117
9.1. Identification of elastic and viscoelastic constants of selected thermosets.....	117
9.1.1. Epoxy resin.....	117
9.1.2. Polyester resin	120
9.2. Influence of fibre volume fraction on effective elastic constants of selected UFRT composites	123
9.3. Calculation of effective viscoelastic constants of selected UFRT composites	126
10. Rheological simulations.....	129
10.1. Constitutive equations to simulate selected rheological processes.....	129
10.1.1. Thermosetting polymers.....	129
10.1.2. UFRT composites.....	133
10.2. Concept of numerical study	136
10.3. Rheological simulations for epoxy resin	140
10.4. Rheological simulations for UFRT composites	146
10.4.1. Glass-epoxy UFRT composite.....	146
10.4.2. Carbon-epoxy UFRT composite.....	152
11. Final conclusions.....	159
References.....	165
Brief biographies of authors	169
