

TABLE OF CONTENTS

Preface	7
Notation	10
1. Accuracy of computation	13
1.0. Introduction to Chapter 1	13
1.1. Propagation of data errors.....	17
1.2. Propagation of rounding errors	27
1.3. Propagation of data errors and rounding errors.....	40
1.4. Engineering applications	45
2. Solving linear algebraic equations	54
2.0. Introduction to Chapter 2	54
2.1. Matrix factorisation	59
2.2. Non-iterative algorithms	66
2.3. Iterative algorithms.....	78
2.4. Engineering applications	81
3. Approximation	84
3.0. Introduction to Chapter 3	84
3.1. Interpolation	91
3.2. Least-squares approximation	101
3.3. Other types of approximation	117
3.4. Engineering applications	120
4. Solving nonlinear algebraic equations	123
4.0. Introduction to Chapter 4.....	123
4.1. Preliminary exercises.....	132
4.2. Single-point iterative algorithms	134
4.3. Multiple-point iterative algorithms	150
4.4. Accuracy of numerical solutions	155
4.5. Engineering applications	164
5. Numerical differentiation	166
5.0. Introduction to Chapter 5	166
5.1. Accuracy.....	170
5.2. Design of differentiation formulae.....	179
5.3. Optimisation of differentiation step.....	184
5.4. Engineering applications	186
6. Numerical integration	189
6.0. Introduction to Chapter 6.....	189
6.1. Preliminary exercises.....	195
6.2. Quadrature-based methods	199
6.3. Monte-Carlo methods	219
6.4. Engineering applications	222

7. Solving ordinary differential equations	225
7.0. Introduction to Chapter 7	225
7.1. Preliminary exercises	234
7.2. Single-step methods	237
7.3. Multi-step methods	258
7.4. Engineering applications	270
Index of basic concepts of numerical analysis	276
Index of MATLAB functions	278
