Notations and symbols	9
1. Introduction	11
2. Quadratic functionals for linear retarded type time delay system	15
2.1. A linear retarded type time delay system	15
2.1.1. Mathematical model of a linear time delay system	15
2.1.2. Stability concept	16
2.1.3. The Lyapunov functional	17
2.1.4. Necessary and sufficient condition of stability	18
2.1.5. Calculation of the value of the performance index	18
2.2. The quadratic functional for a linear system with one delay	19
2.2.1. Mathematical model of a linear time delay system with one delay	19
2.2.2. Determination of the quadratic functional	21
2.2.3. The examples of the parametric optimization	25
2.2.3.1. The parametric optimization of the inertial system with delay and a P-controller	25
2.2.3.2. The parametric optimization of the inertial system with delay and an I-controller	35
2.3. The quadratic functional for a linear system with two delays	45
2.3.1. Mathematical model of a linear system with two delays	45
2.3.2. Determination of the functional	46
2.3.3. Solution of the set of differential equations (??) for commensurate delays	50
2.3.4. The example	52
2.4. A linear system with both lumped and distributed retarded type time delay	54
2.4.1. Mathematical model of a linear system with both lumped and distributed retarded type time delay	54
2.4.2. Determination of the quadratic functional	55
2.4.3. The examples	59
2.4.3.1. The example 1	59
2.4.3.2. The example 2	64
2.5. A linear system with a retarded type time-varying delay	69
2.5.1. Mathematical model of a linear system with a retarded type time-varying delay	69
2.5.2. Determination of the quadratic functional	70

2.5.3.	The examples	74
2.5.3.1.	The inertial system with delay and a P-controller	74
2.5.3.2.	The example. Two dimensional system	77
2.6.	The more general quadratic functional for a linear system with one delay	83
2.6.1.	Mathematical model of a linear time delay system with one delay	83
2.6.2.	Determination of the quadratic functional	83
2.6.3.	The example. The problem of parametric optimization for separately excited D.C. motor angular velocity control system	87
2.6.3.1.	Optimization results	105
3.	A linear neutral system	107
3.1.	Preliminaries	107
3.2.	A linear neutral system with lumped delay	110
3.2.1.	Mathematical model of a linear neutral system with lumped delay	110
3.2.2.	Determination of the quadratic functional for a neutral system with one delay	111
3.2.3.	Calculation of the value of performance index	114
3.2.4.	The example of the parametric optimization of neutral system	115
3.2.4.1.	The parametric optimization of the inertial system with delay and a PD-controller	115
3.3.	The quadratic functional for a neutral system with both lumped and distributed time delay	119
3.3.1.	Mathematical model of a linear neutral system with both lumped and distributed time delay	119
3.3.2.	Determination of the quadratic functional coefficients	120
3.3.3.	The example	125
3.4.	A linear neutral system with a time-varying delay	127
3.4.1.	Mathematical model of a linear neutral system with a time-varying delay	127
3.4.2.	Determination of the quadratic functional	129
3.4.3.	The example. The inertial system with delay and a PD-controller	135
4.	The Lyapunov matrix for a retarded type time delay system	141
4.1.	Mathematical model of a retarded type time delay system	141
4.2.	The quadratic functional for a retarded type time delay system	142
4.3.	Calculation of the value of the performance index	145
4.4.	The Lyapunov matrix for a system with one delay	146
4.5.	The examples of the parametric optimization	148
4.5.1.	The parametric optimization problem for the inertial system with delay and a P-controller	148
4.5.1.1.	The system with zero equilibrium point	148
4.5.1.2.	The system with non zero equilibrium point	151
4.5.2.	The parametric optimization of a second order time delay system with a P-controller	156
4.5.3.	The parametric optimization of a second order time delay system with a PD-controller	161

4.5.4.	The parametric optimization problem for the inertial system with delay and a PI-controller	166
4.5.5.	The parametric optimization of a second order time delay system with a PI-controller	174
4.5.6.	The parametric optimization of a second order time delay system with a PID-controller	185
4.6.	The Lyapunov matrix for a system with two commensurate delays	193
4.7.	The examples of the parametric optimization	196
4.7.1.	The parametric optimization problem for a scalar system with two delays and a P-controller	196
4.7.2.	The parametric optimization problem for a scalar system with two delays and a PI-controller	201
4.8.	The Lyapunov matrix for a system with both lumped and distributed delay	210
4.8.1.	Mathematical model of a time delay system with both lumped and distributed delay	210
4.8.2.	The quadratic functional	211
4.8.3.	A Lyapunov matrix for system (4.250)	212
4.8.4.	The example	215
5.	The Lyapunov matrix for a neutral system	217
5.1.	The neutral system with one delay	217
5.1.1.	Mathematical model of a neutral system with one delay	217
5.1.2.	The quadratic functional for a neutral system with one delay	219
5.1.3.	Calculation of the value of the performance index	222
5.1.4.	The Lyapunov matrix for a neutral system with one delay	223
5.1.5.	The examples of the parametric optimization	225
5.1.5.1.	The parametric optimization problem for a linear neutral system with a P-controller	225
5.1.5.2.	The parametric optimization problem for the inertial system with delay and a PD-controller	228
5.1.5.3.	The parametric optimization problem for the inertial system with delay and a PID-controller	234
5.1.5.4.	The parametric optimization problem for the second order time delay system with a PD-controller	240
5.2.	The neutral system with two delays	247
5.2.1.	Mathematical model of neutral system with two delays	247
5.2.2.	The quadratic functional for a neutral system with two delays	250
5.2.3.	The Lyapunov matrix for a neutral system with two delays	252
5.2.4.	The Lyapunov matrix for a neutral system with two commensurate delays	255
5.2.5.	The parametric optimization problem for a system with two delays	259
5.2.6.	The examples of the parametric optimization	263
5.2.6.1.	The parametric optimization problem for a neutral system with two delays and a P-controller	263
5.2.6.2.	The parametric optimization problem for a neutral system with two delays and a PD-controller	267

6. Conclusion	275
7. Appendix	279
A dynamical system	279
Nonlinear time delay system	279
A C_0 -semigroup	280
Linear time delay system	281
