Contents

1. Introduction **9**

2. Deep inelastic scattering **12**

2.1. DIS kinematics . . . 12
2.2. DIS cross section and structure functions . . . 14
2.3. Structure functions and gluons . . . 16
2.4. Direct $\Delta g/g$ measurements . . . 19

3. Previous ΔG measurements **21**

3.1. Scaling violation of g_1 . . . 21
3.2. Direct measurements of $\Delta g/g$ . . . 22
3.3. Measurements of A_{LL} as a function of jet or hadron p_T . . . 26

4. Experimental set-up **30**

4.1. The muon beam . . . 30
4.2. The polarised target . . . 31
4.3. COMPASS spectrometer . . . 31
4.4. Trigger system . . . 32
4.5. Data analysis chain . . . 33

5. Methods of $\Delta g/g$ extraction **35**

5.1. Previous $\Delta g/g$ extraction method . . . 35
5.2. The all-p_T method . . . 39

6. Data selection and experimental inputs **43**

6.1. Data selection . . . 43
6.2. Analysis inputs from the experimental data . . . 44

7. Monte Carlo and neural network **48**

7.1. Monte Carlo . . . 48
7.2. Neural networks . . . 52

8. Systematic studies **57**

8.1. MC tests of the new method . . . 57
8.2. Global vs consecutive configuration . . . 57

8.3. False asymmetries . . . 58
8.4. Neural network stability . . . 60
8.5. $f, P_{\mathrm{b}}, P_{\mathrm{t}}$ uncertainties . . . 61
8.6. MC studies . . . 61
8.7. Radiative corrections . . . 65
8.8. Summary of systematic uncertainties . . . 66

9. Results **67**

9.1. Possible reduction of the statistical uncertainty of $\Delta\mathrm{g}/\mathrm{g}$ . . . 71
9.2. Analysis of the proton data . . . 71

10. Summary and outlook **73**

Bibliography **75**
