

# Contents

Introduction . . . . .	7
1. Basic algebraic properties of integers . . . . .	9
2. Congruences mod $m$ and basic algebraic properties of the rings $\mathbb{Z}_m$	16
3. Local method . . . . .	23
4. Gaussian integers . . . . .	30
5. Representation of prime numbers as $x^2 + dy^2$ . . . . .	34
6. Legendre symbol and the Quadratic Reciprocity Law . . . . .	38
7. Applications to cryptography . . . . .	51
8. Classical problems of number theory . . . . .	55
9. Prime Number Theorem and its proof . . . . .	64
10. Integral elements. Trace and norm . . . . .	70
11. The rings of integers in finite extensions of $\mathbb{Q}$ . . . . .	76
12. Decomposition of ideals in Dedekind domains . . . . .	82
13. The rings of integers in quadratic and cyclotomic extensions of $\mathbb{Q}$	88
14. Splittings of ideals. A new look at QRL . . . . .	100
15. Hints and solutions to selected problems . . . . .	108
Bibliography . . . . .	119
Index . . . . .	120
